

Checklist Today, Greener Tomorrow

Switch to alcohol-based hand rub
for surgical decontamination.

- ✓ Alcohol-based hand rub is a liquid agent for surgical hand disinfection containing 60–80% alcohol and is approved by

NICE
National Institute
for Health and
Care Excellence

World Health
Organization

- ✓ A traditional water based surgical scrub can use up to **18 litres** of water per person!
- ✓ There are no differences in SSI with ABHR versus formal scrubbing and it has been found to be better tolerated by surgeons.
- ✓ A quarter of the worlds populations are now living in countries faced with extreme water stress.
