

**CASE MATRIX
FOR CASE PRESENTATIONS**

Child with	Primary dentition	Mixed dentition	Permanent dentition
Disability/impairment/chronic systemic disease			
Fear/anxiety			
Dental caries			
Dento-alveolar trauma			
Non-carious tooth wear			
Teeth with malformed enamel/dentine			
Craniofacial and/or dental anomalies			
Malocclusion			
Periodontal and soft tissue lesions			
Need for multidisciplinary care			

Candidates should submit cases that when considered in totality cover as many aspects of the case matrix as possible, thus demonstrating across all 3 cases a broad range of clinical and patient management skills for different stages of developing dentitions in children. Cases should demonstrate skills expected of a specialist in paediatric dentistry. The Case Matrix may be useful as an aide memoire to note the aspects covered by the cases being submitted.

Candidates are also advised to read the Case History Template guidance in Appendix F.
